

2023 ANNUAL REPORT

EBM
OFFSHORE

4 FINANCIAL INFORMATION 2023

- The Turnkey segment includes revenues from Turnkey supply contracts and after-sales services, which consist mainly of large production systems, large mooring systems, deepwater export systems, fluid transfer systems, tanker loading and discharge terminals, design services and supply of special components and proprietary designs and equipment. The new energy business, which mainly relates to floating offshore wind solutions, also forms part of the Turnkey segment.

No operating segments have been aggregated to form the above reportable segments.

The Company's corporate overhead functions do not constitute an operating segment as defined by IFRS 8 'Operating segments' and are reported under the 'Other' section in note 4.3.2 Operating Segments and Directional Reporting.

Operating segment information is prepared and evaluated based on Directional reporting, for which the main principles are explained in note 4.3.2 Operating Segments and Directional Reporting.

(f) Demobilization obligations

The demobilization obligations of the Company are either stated in the lease contract or derived from the international conventions and the specific legislation applied in the countries where the Company operates assets. Demobilization costs will be incurred by the Company at the end of the operating life of the Company's facilities.

For operating leases, the net present value of the future obligations is included in property, plant and equipment, with a corresponding amount included in the provision for demobilization. As the remaining duration of each lease reduces, and the discounting effect on the provision unwinds, accrued interest is recognized as part of financial expenses and added to the provision. The subsequent updates of the measurement of the demobilization costs are recognized, both impacting the provision and the asset.

In some cases, when the contract includes a demobilization bareboat fee that the Company invoices to the client during the demobilization phase, a receivable is recognized at the beginning of the lease phase for the discounted value of the fee. When the receivable is recognized, it is limited to the amount of the corresponding demobilization obligation. These receivables are subject to expected credit loss impairment, which are analyzed together with the finance lease receivable using the same methodology.

For finance leases, demobilization obligations are analyzed as a component of the sale recognized under IFRS 15. It is determined whether the demobilization obligation should be defined as a separate performance obligation. In that case, because the demobilization operation is performed at a later stage, the related revenue is deferred until the demobilization operations occur. Subsequent updates of the measurement of the demobilization costs are recognized immediately through the contract liability, for the present value of the change.

C. OTHER MATERIAL ACCOUNTING POLICIES

The consolidated financial statements of the Company have been prepared on the historical cost basis, except for the revaluation of certain financial instruments.

(a) Distinction between current and non-current assets and liabilities

The Company classifies its assets as current when it expects to realize the asset, or intends to sell or consume it, in its normal operating cycle. Inventory and contract balances are classified as current while the time when these assets are sold or consumed might be longer than twelve months. In the context of Company's operations it is considered that its operating cycle begins with the construction of the vessels up to the moment of sale or transfer to finance lease receivable. Financial assets are classified as current when they are realized within twelve months. Liabilities are classified as current when they are expected to be settled within less than twelve months and the Company does not have an unconditional right to defer settlement of the liability for at least 12 months after the reporting period. All other assets and liabilities are classified as non-current.

(b) Consolidation

The Company's consolidated financial statements include the financial statements of all controlled subsidiaries.

In determining, under IFRS 10, whether the Company controls an investee, the Company assesses whether it has (i) power over the investee, (ii) exposure or rights to variable returns from its involvement, and (iii) the ability to use power over investees to affect the amount of return. To determine whether the Company has power over the investee, multiple
